Motivation

- Checklists are simple tools that are often used in clinical applications because they are easy to *use*, *deploy*, and *scrutinize*.
- The large majority of checklists are hand-crafted by panels of a experts.
- However, creating checklists by hand is often a complex and time-consuming process.
- Learning checklists from data allows us to quickly create checklists that can be evaluated using measurable objectives.

We develop a method to learn predictive checklists from data.

Paper: <https://arxiv.org/abs/2112.01020>

Code: https://github.com/MLforHealth/predictive_checklists/

Checklists as Simple Linear Models

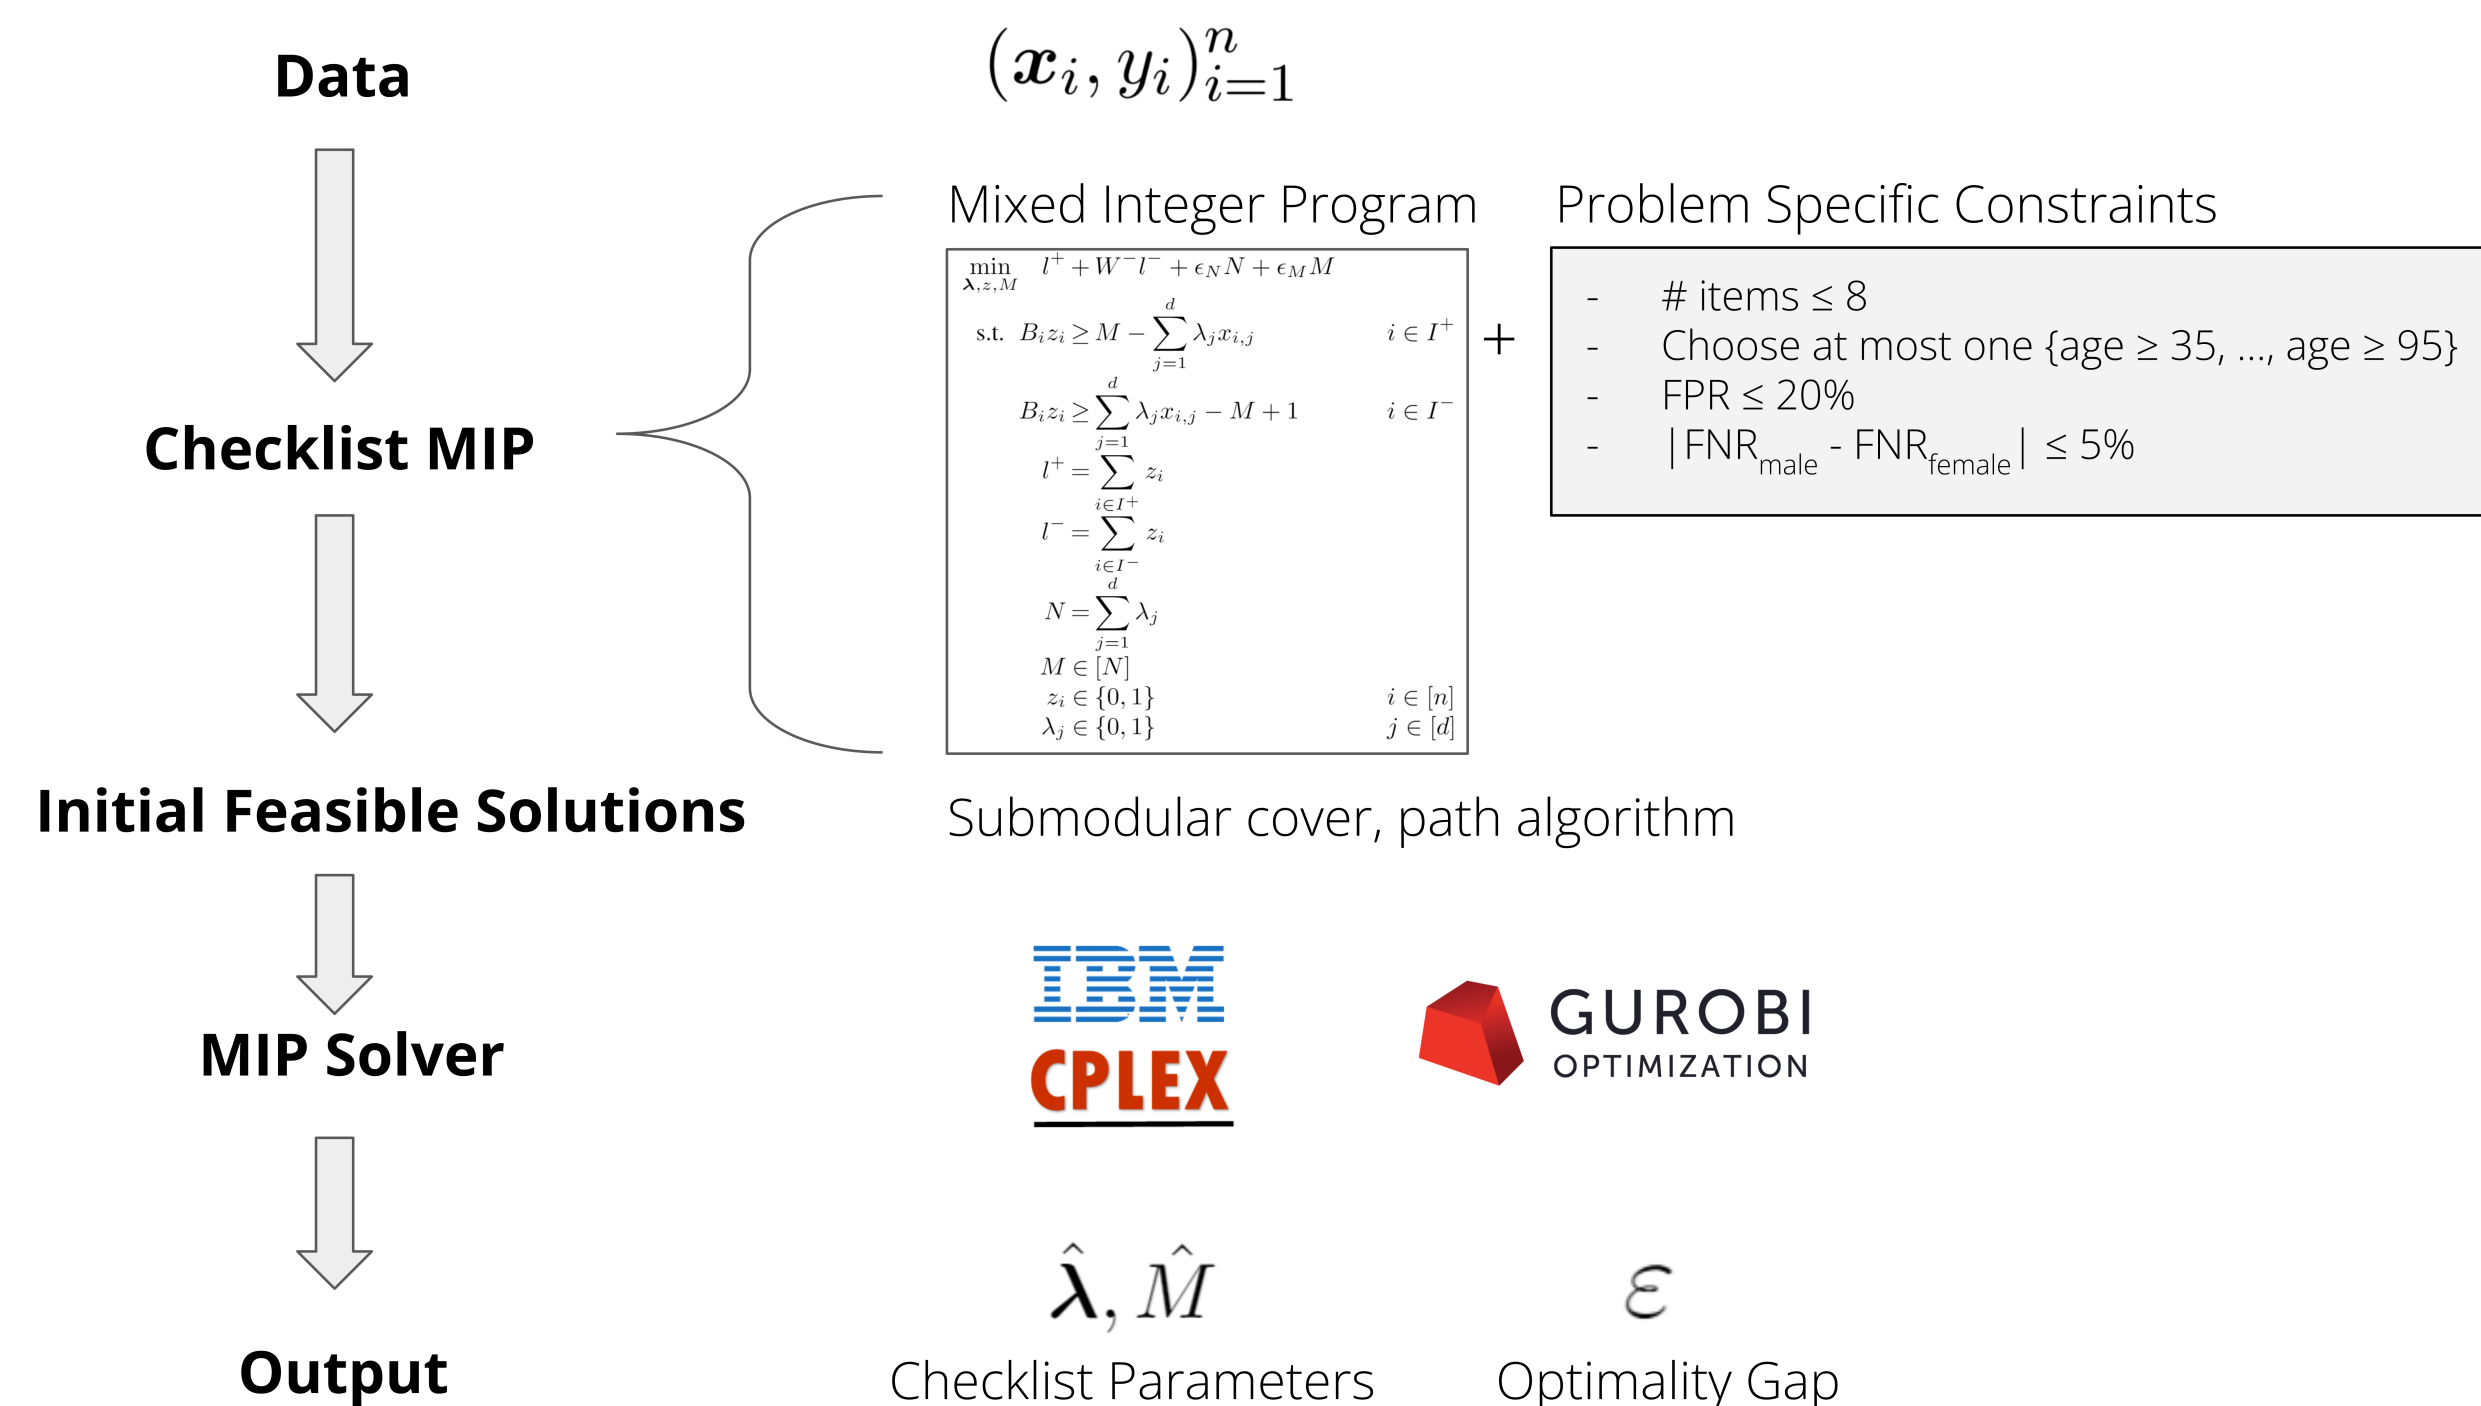

Data $(\mathbf{x}_i, y_i)_{i=1}^n$ $\mathbf{x}_i \in \{0, 1\}^d$ $y_i \in \{0, 1\}$

e.g. Age ≥ 30 , Age ≥ 45 , Age ≥ 65 , Systolic BP ≥ 140 , etc

Model $\hat{y}_i = \mathbb{1}(\boldsymbol{\lambda}^T \mathbf{x}_i \geq M)$

Coefficients $\boldsymbol{\lambda} = [\lambda_1, \dots, \lambda_d] \in \{0, 1\}^d$
where $\lambda_j = 1 \iff$ checklist uses item j

Training Pipeline

Customizable Constraints

	Example	Constraint
Model Size	Use $\leq N_{max}$ items	$N \leq N_{max}$
Binarization	Choose at most one Age feature	$\lambda_{age \geq 45} + \lambda_{age \geq 60} + \dots \leq 1$
Performance	FPR $\leq \beta$	$I^- \leq \lceil \beta \cdot n^- \rceil$
Group Fairness	Max FPR disparity of δ between males and females	$\left \frac{I_M^-}{n_M} - \frac{I_F^-}{n_F} \right \leq \delta$
Minimax Fairness	No group with FNR worse than δ	$I_g^+ \leq \lceil \delta \cdot n_g^+ \rceil \quad \forall g \in G$

Demo: Fair Mortality Prediction

Goal: Predict in-hospital mortality in ICU patients given Continuous Renal Replacement Therapy (CRRT) while maintaining fairness between intersectional groups.

(a) No Fairness Constraints

Predict Mortality Given CRRT if 3+ Items are Checked	
Age ≥ 66.0 years	<input type="checkbox"/>
AST ≥ 162.6 IU/L	<input type="checkbox"/>
Blood pH ≤ 7.29	<input type="checkbox"/>
MCV ≥ 99.0 fl	<input type="checkbox"/>
Norepinephrine ≥ 0.1 mcg/kg/min	<input type="checkbox"/>
Platelets $\leq 65.0 \times 10^3/\mu L$	<input type="checkbox"/>
RDW $\geq 19.2\%$	<input type="checkbox"/>
Time in ICU ≥ 14.1 hours	<input type="checkbox"/>

	FNR	FPR	Worst FNR	Max FPR	Gap
Training	20.0%	43.9%	33.3%	24.3%	
Test	22.2%	52.6%	62.5%	54.5%	

Constraints

- FNR $\leq 20\%$
- At most one item per feature
- Use at most 8 items

Objective: Minimize FPR

(b) With Fairness Constraints

Predict Mortality Given CRRT if 2+ Items are Checked	
ALT ≥ 16.0 IU/L	<input type="checkbox"/>
Bicarbonate ≤ 17.0 mmol/L	<input type="checkbox"/>
Blood pH ≤ 7.22	<input type="checkbox"/>
Norepinephrine ≥ 0.1 mcg/kg/min	<input type="checkbox"/>
RDW $\geq 19.2\%$	<input type="checkbox"/>
Time in ICU ≥ 117.3 hours	<input type="checkbox"/>

	FNR	FPR	Worst FNR	Max FPR	Gap
Training	17.5%	52.2%	18.1%	13.9%	
Test	19.6%	55.1%	50.0%	38.3%	

Constraints

- FNR $\leq 20\%$
- At most one item per feature
- Use at most 8 items
- FPR gap $\leq 15\%$
- Worst FNR $\leq 20\%$

Objective: Minimize FPR
